SOL

Sustainable

WAC Lighting is proud to introduce this Organic LED chandelier. Sol is a new, luxury decorative chandelier utilizing white OLED panels as the exclusive light source. Sol uses Osram's ORBEOS Organic LED panels, the world's most revolutionary nanotechnology light source available today. The Sol chandelier is inherently sustainable; designed around energy efficient and environmentally friendly technology, and individually crafted in WAC Lighting's zero-landfill manufacturing campus.

Inspired

Inspired by the sun and ancient tribal designs, Sol's design celebrates the sun as the source of all organic energy, provider of light, and sustainer of life. Sol symbolizes hope and vitality, eternal energy, renewal, and light.

Innovative

SOL features adjustable light distribution for ambient mood lighting, free of undesirable shadowing or glare. The circular satellite OLED panels rotate up for indirect lighting, or tilt down to comfortably illuminate the surface below, or faces around a table. The central downlight also provides supplemental lighting on a tabletop.

Exceptionally thin (2.1 millimeters), the Organic LED panel distributes quality light with solid color rendering (CRI 75) and a warm color temperature (2800K). ORBEOS panels are fully dimmable and deliver a uniform area of glare-free light.
